7. Project Documentation Phase

The Project Documentation Phase focuses on recording the complete implementation details, configurations, testing procedures, and results of the **Implement Client Script & UI Policy (Incident)** project.

The documentation begins with the project problem statement and objective, explaining the need for maintaining accurate and consistent Incident records in ServiceNow. The requirements and proposed solution are also documented to provide a clear understanding of the project.

The configuration details of the **High Impact Control UI Policy** and its UI Policy Action are recorded, including the condition based on the Impact field and the behavior applied to the Urgency field.

The documentation also includes the details of all three Client Scripts. The purpose and functionality of the **onChange**, **onSubmit**, and **onCellEdit** Client Scripts are explained along with their respective configurations and scripts.

The testing process is documented using different test scenarios. These include High Impact validation, automatic Urgency updates, Assigned To validation, reverse condition testing, State list-edit blocking, and successful State updates through the Incident form.

Screenshots are included as supporting evidence for the implementation and testing results. Each screenshot is given a proper figure number and caption so that the configuration and results can be easily understood.

Documentation Includes

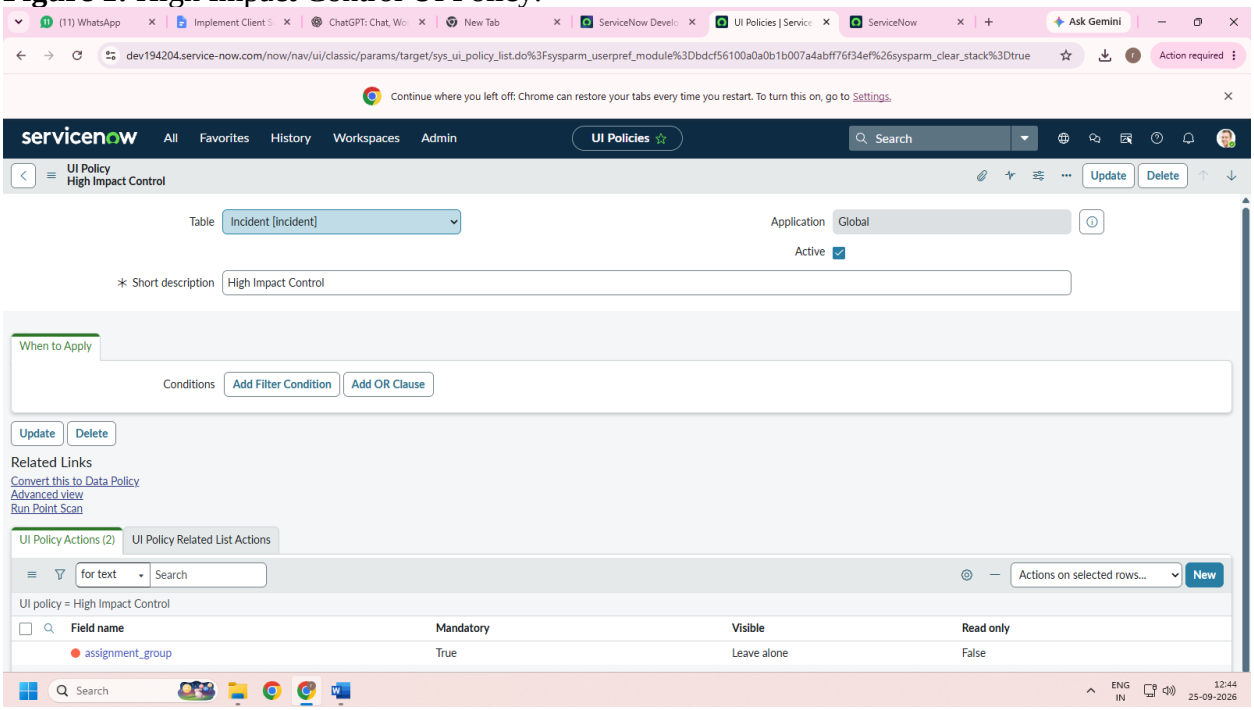

- Project problem statement and objective.
- Functional requirements.
- UI Policy and UI Policy Action configuration.
- Client Script configuration and functionality.
- Implementation steps.
- Testing scenarios and results.
- Screenshots of configurations and test results.
- Final project outcome and conclusion.

Suggested Screenshots

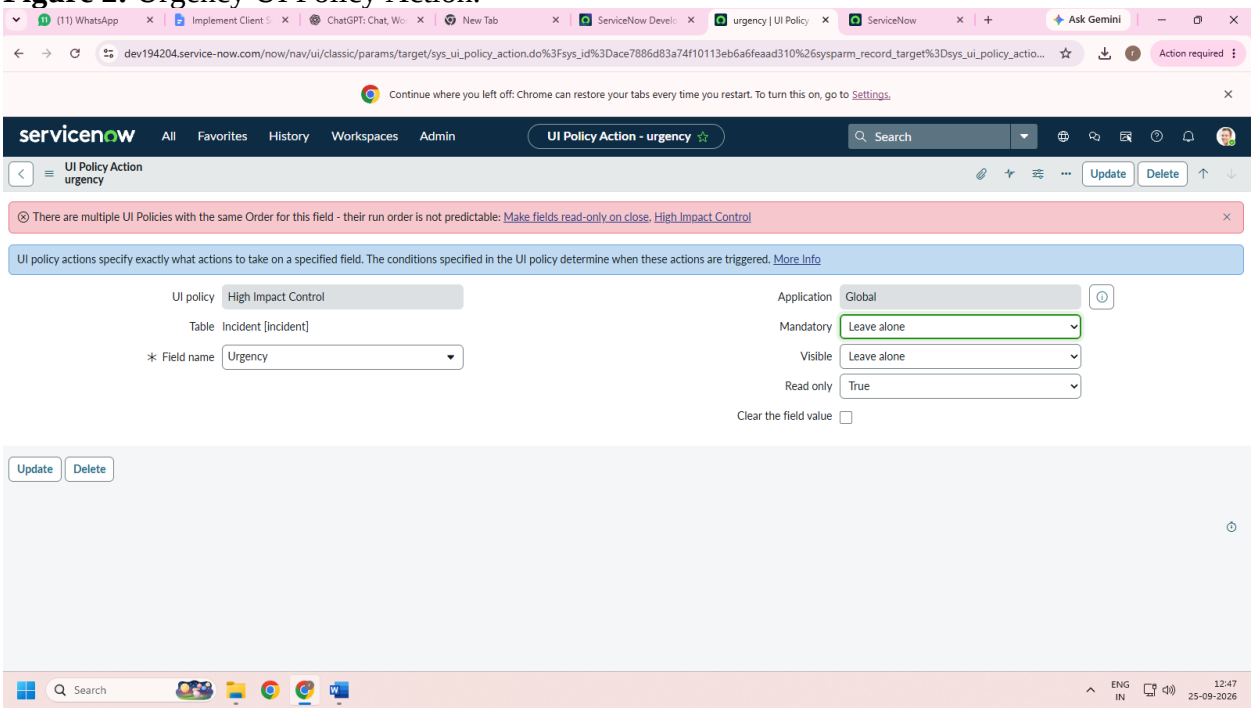

The important screenshots collected during the Development and Testing phases can be included here as documentation evidence. Avoid repeating every screenshot; select the most important configuration and result screenshots.

For example:

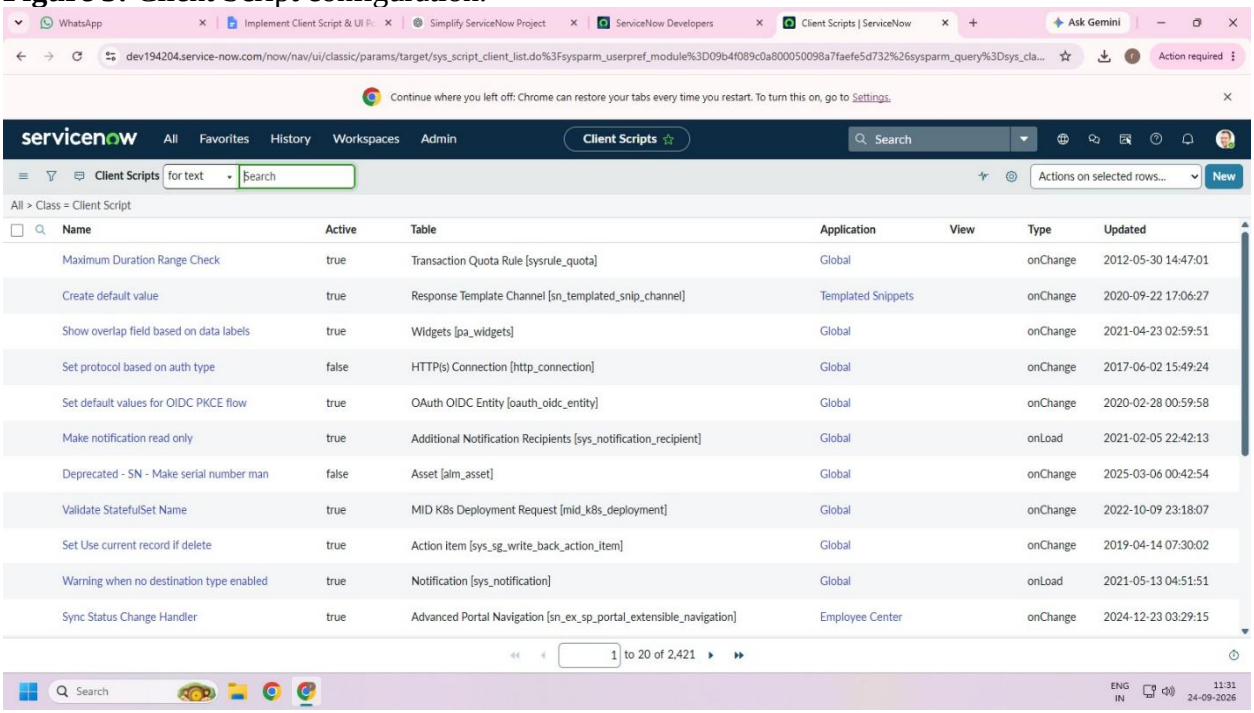

- **Figure 1:** High Impact Control UI Policy.

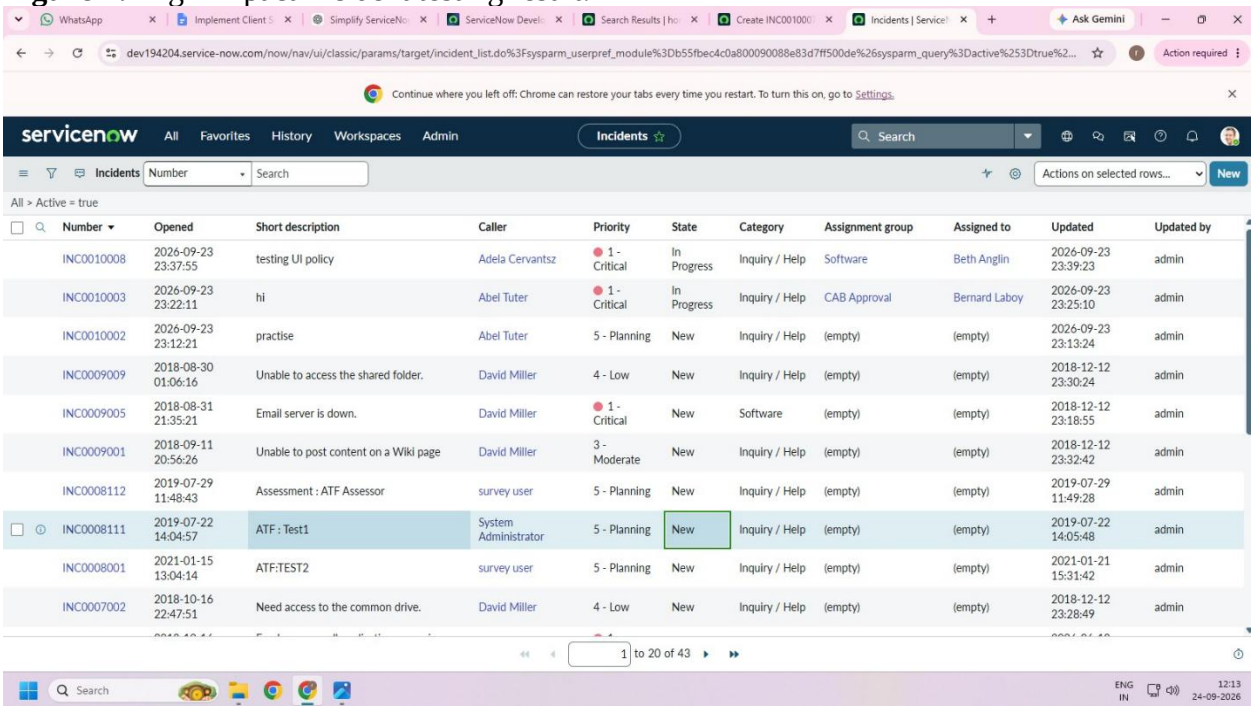

- **Figure 2:** Urgency UI Policy Action.

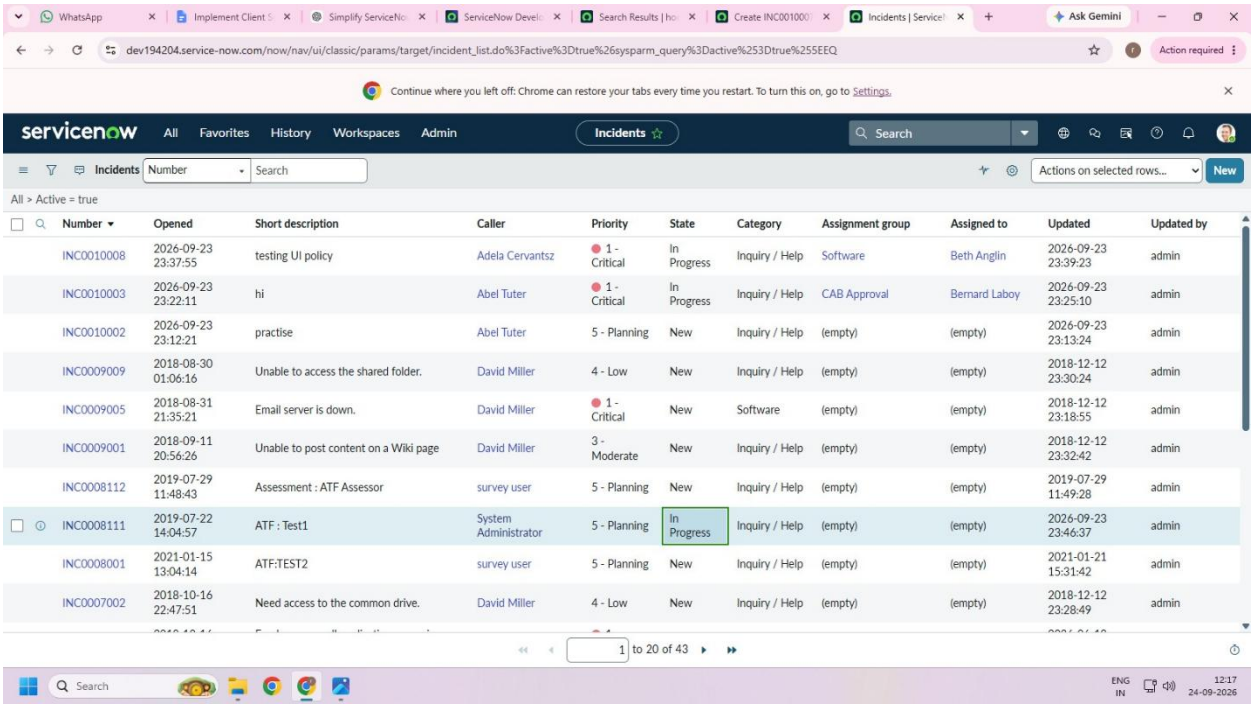

- **Figure 3:** Client Script configuration.

- **Figure 4:** High Impact Incident testing result.

- **Figure 5:** Assigned To validation result.

- **Figure 6:** State list-edit restriction result.

Phase Outcome

The documentation phase provides a complete and organized record of the project. It makes the implementation, configuration, testing process, and final results easy to understand, verify, and present.
